PROFESSIONAL SUMMARY

Seasoned distributed systems architect with 8+ years of production experience designing high-throughput microservices, event streaming architectures, and resilient databases using Go and PostgreSQL. Expert in Row-Level Security, concurrency optimization, and fault-tolerant background queues.

CORE TECHNICAL COMPETENCIES

Core Languages: Go (Golang) • SQL (PostgreSQL) • C/C++ • Bash

Distributed & Cloud: Kubernetes • Docker • Redis • Apache Kafka • gRPC • Asynq

Database & Storage: PostgreSQL RLS • pgvector • Connection Pooling • Transaction Isolation

Practices & Tooling: Distributed Tracing • CI/CD Pipelines • Race Condition Diagnostics • TDD

PROFESSIONAL EXPERIENCE

Staff Software Engineer — [CloudScale Technologies Inc.](#) 2021 – Present | Seattle, WA / Remote

- Architected high-throughput distributed ingestion pipelines in Go processing 150k events/sec with sub-20ms p99 latency.
- Enforced multi-tenant PostgreSQL Row-Level Security (RLS) policies and transaction isolation across 45+ tenant databases.
- Designed fault-tolerant asynchronous queue workers using Redis and Asynq, cutting retry overhead by 40%.
- Eliminated race conditions and goroutine leaks across critical microservices, establishing strict concurrency linting in CI.

Senior Backend Engineer — [Datastream Systems](#) 2018 – 2021 | San Francisco, CA

- Engineered gRPC microservices and RESTful HTTP APIs serving over 10 million daily active requests.
- Optimized PostgreSQL query plans, B-tree indexes, and connection pool sizing, improving database throughput by 65%.
- Authored hermetic integration testing harnesses for Go distributed transactions and Redis failover simulations.

EDUCATION

B.S. in Computer Science — University of Washington (*Magna Cum Laude*) 2018

CERTIFICATIONS & CREDENTIALS

🏆 AWS Certified Solutions Architect – Professional
