PROFESSIONAL SUMMARY

Quality engineering architect with 6+ years designing robust, flakiness-free automated test frameworks with Playwright, TypeScript, and Vitest. Specialized in hermetic test state isolation, parallel worker execution, and automated k6 performance load gating.

CORE TECHNICAL COMPETENCIES

E2E & Automation: Playwright • TypeScript • Cypress • Page Object Model • Parallel Isolation

Load & Performance: k6 Load Testing • Artillery • WebSocket Concurrency • Resource Leak Profiling

CI/CD & Fixtures: GitHub Actions CI • Docker Test Fixtures • Hermetic DB Seeding • Vitest

Programming & API: TypeScript • Golang • Python • REST / WebSocket Contract Testing

PROFESSIONAL EXPERIENCE

Principal Quality Engineer — Spotify Developer Tooling 2021 – Present | Montreal / Remote

- Architected company-wide Playwright test automation suite covering 150+ end-to-end user journeys with 99.7% pass stability.
- Designed isolated test database seeding harnesses, eliminating inter-test data contamination in parallel CI runs.
- Integrated automated k6 performance benchmarking into pull request CI gates, preventing latency regressions.
- Established Test-Driven Development (TDD) best practices across frontend and backend engineering teams.

Senior QA Automation Engineer — Deezer Music Services 2018 – 2021 | Paris, France

- Built automated cross-browser testing pipelines for web player and mobile responsive layouts.
- Reduced regression testing execution time from 6 hours to 18 minutes using containerized parallel runners.

EDUCATION

M.S. in Software Quality Engineering — Sorbonne Université 2019

B.S. in Computer Science — Université de Montréal 2017

CERTIFICATIONS & CREDENTIALS

 ISTQB Certified Tester Advanced Level (CTAL-TA)
